

Created by SAMTHOMAS

Download Paros from <http://www.parosproxy.org/download.shtml>.

For this to work make sure u have the latest JRE already installed. Its available at java.com under the java for computers section.

PRE REQUISITE: CONTROL LVL7 + FOREST AND UR CHARACTER SHOULD BE LVL 12 +

1. Configure PAROS. Open command prompt and type ipconfig. This is to find out your ip address in the local network. What we want is an IPv4 address. Mine was 192.168.1.68 .

Open Paros>tools>options>local proxy

Set the ip address as the address u found from the above step and port=8080

Click ok.

Go to Trap Tab and check trap response.

Keep paros running in the background.

2. U have to be ready change change your proxy address for the system. To do this u need to open Internet Properties and go to connections tab>lan settings. Or u could search the word "proxy" in START and click on configure proxy server.
3. Tick checkbox use proxy server. The details to be filled are same as above. And tick bypass for local address. DO NOT CLICK ON OK YET.
4. Now close all internet based applications and all browser windows. It will be too time consuming otherwise.
5. Open a browser window and go to your game in KABAM. Even if u have a facebook/google + game login from kabam for this to work. Also u have to do the coming steps really fast please read ahead b4 u start with step 5.
6. The moment you see this state of your game loading procedure click OK to change the proxy address. The the blue bar should be at that stage for u to press okay.

- 7.
8. Wait for some time, you should see some text in Paros. The time depends on ur net speed. This text is ur response. You got this because u checked trap response. Now check the box for trap request too. The text appears in 2 rectangular boxes one on top and the one right below. You have to watch out for the one below.
9. Click continue till u find step 10.
10. When you find text starting with this(values are different but titles will be the same)

```
{
  "alliance_membership": {
    "player": {
      "type": "m",
      "level": 15,
      "race": "primus",
      "might": 254218,
      "name": "samthomas",
      "id": 21810950
    },
    "source": "request",
    "created_at": "2012-05-05T08:05:57Z",

    },
    {
      "type": "City",
      "level": 8,
      "x": 526,
      "y": 265,
      "name": "stone_dragon ....."
    }
  ]
}
```

11. Once u find this press ctrl+f and type in the search box anthropus and click search. You will find a field "Anthropus Talisman":1231. The number will be different according to what you have now. Click there and edit only the number to 101231 .(add 100k to the number already present ensuring you don't lose talis u have earned) Theres no point putting too much as once you are done with this and you change your computer settings back to normal you will lose all of them.
12. After this keep on clicking continue till ur game loads fully. Do not shut paros
13. Once the above steps are done go to empire tab and click on the spec op image and click create.(ur game will be running slow).
14. U'll have to go back to paros and keep clicking continue so that the game can create ur spec op this process requires the game to communicate with the server , that's y u have to do it!

15. Once u have confirmed the creation of outpost. Undo step 3. Close paros and refresh your browser. Njoy!!!!
